SUMMARY

I am a pre-final year student with a passion for web development and a strong foundation in programming. Specializing in both front-end and back-end technologies, I focus on crafting dynamic user interfaces and integrating server-side functionalities, particularly with the MERN stack (MongoDB, Express.js, React.js, Node.js).

Proficient in programming languages such as Java (Basic), JavaScript, PHP, I excel in front-end development using HTML, CSS, and JavaScript. With a track record in project management, I ensure timely completion of projects.

My strengths include problem-solving, particularly in Data Structures and Algorithms (DSA) using Java. I thrive on challenges and continuously adapt to emerging technologies, aiming to deliver innovative solutions in the ever-evolving landscape of web development.

I am eager to contribute my skills and passion to a professional environment, continually learning and growing in this dynamic field.

Currently, I am seeking a remote internship opportunity in web development to apply and enhance my skills while making meaningful contributions to innovative projects.
